GENERAL CHARACTERISTIC

LU – 1412 – 9 dried distarch phosphate is a product of esterification of potato starch with sodium trimetaphosphate, with a medium degree of cross-linking, the maximum phosphorus (P) content is 0.5%. When used as a stabilizer it helps to maintain physical and chemical properties of the products to which it is added in small amounts, preventing or delaying spontaneous and adverse changes which occur in them. In aqueous solutions, depending on the concentration, it forms pastes with various density and very short structures.

It does not degrade in acidic solutions with a pH value > 4.

It is particularly recommended for: meat products – cured meat, finely ground cured meat, pates, sauces for canned meat and vegetables, salad sauces, dressing, mayonnaise, soups, frozen meals, fruit filling for confectionery goods, baby food, yoghurts and all the aforesaid products with reduced calorific value (a substitute for fat).
